

**SAFE-T-COVER**  
by Hydrecowl

Unlocked enclosures provide no protection from theft and vandalism.

# Introducing the NEW **MUNI-LOK™**

*always locked, always protected*

Safe-T-Cover's **patented MUNI-LOK** utilizes the traditional locking mechanism from underground vault hatches to secure our above-ground enclosure doors.

Now municipalities can specify a single locking mechanism for all their existing vaults AND above-ground enclosures USING THE SAME KEY.

- Securely locked from the moment of installation
- No more padlocks, key rings, or combinations
- Municipality employees and trusted contractors already have the key
- 95% of enclosures are never locked resulting in valve theft and vandalism
