

PUMP ENCLOSURES BY SAFE-T-COVER

YOUR PUMP SYSTEM NEEDS PROTECTION. **WE'VE GOT YOU COVERED.**

WE PROVIDE PUMP ENCLOSURES FOR

- Municipal Booster Pumps
- Fire Protection Pumps
- Wastewater and Sewage Pumps
- Stormwater Pumps
- Well Pumps
- Skid Systems

SAFE-T-COVER ENCLOSURE VS. PUMP HOUSE

Why build a pump house when a Safe-T-Cover Pump Enclosure is far superior?

- Eliminate pump house engineering and design costs
- Eliminate pump house permit costs
- Safe-T-Cover Enclosures are classified as “modular” and do not require permits
- Removable doors enable full access to pumps and control panels
- Can be assembled on-site or pre-fab on a skid
- Accessories easily added to meet your specific needs
- Can be retro-fitted to protect existing pumps from freezing conditions

THE ANATOMY OF A SAFE-T-COVER PUMP ENCLOSURE

Safe-T-Cover Pump Enclosures offer the perfect solution to your pump housing problem. Our marine-grade aluminum enclosures are built to last the entire lifespan of your pump system. Genuine redwood bracing allows us to engineer virtually any size enclosure to meet your specific pump system needs. Polyisocyanurate insulation inside every panel offers thermal protection and noise dampening not found in most pump houses. Removable doors offer

full access to pumps and control panels—no more squeezing through an access panel to perform routine maintenance.

Our pump covers can accommodate any cooling or heating needs as well as accessories of any kind.

Contact Safe-T-Cover to discover all of our flexible solutions and replace “pump house” thinking with Pump Enclosure solutions.
